Two High-Capacity Dye Sublimation Printers

- ❖ Two high-capacity dye sublimation printers ensure that your customer will always get his or her photo prints. If the first printer runs out of media or fails for any reason, Fun Stop Photos™ automatically switches its print process to the second printer.
- ❖ Having two printers doubles the media capacity (to 1,200 – 4” x 6” prints), and allows the service technician ample time to reload the empty printer. Even if the service tech is unavailable for days or weeks, Fun Stop Photos™ will remain in service until a technician can attend to the machine.
- ❖ A printer “empty” or “failure” icon will appear on the rear 26-inch LCD screen, alerting the service technician of a problem – without requiring the technician to open the machine. This icon is only recognized by trained personnel and only appears if there is an issue that needs service. (See “Software Features” below for more details.)
- ❖ Printers are mounted on an interlocking mounting bracket, which allows for easy “works in a draw” access. In the unlikely event that a printer needs service, it is easily removed in just a few minutes. The Fun Stop Photos™ booth will continue to function using the second printer.

Two Bill Acceptors

- ❖ Currency acceptors are the most vulnerable component in all vending machines. Team Play installs two (2) bill acceptors as a standard feature, literally doubling the ability of your Fun Stop Photos™ photo booth to accept currency and dramatically increasing its reliability.
- ❖ Increased bill capacity allows for less frequent collections. Two 500-bill capacity acceptors accept a total of 1,000 bills.
- ❖ Credit / Debit Card Ready: In addition to having two bill acceptors, your Fun Stop Photos™ booth comes pre-wired to facilitate easy installation of any third-party credit card system. It can be installed at Team Play's factory or installed after market by the Operator.
- ❖ Debit Card System Ready. This feature allows any location using an in-house debit card system to let their patrons know that the photo booth is card activated. The on-screen message will read "Swipe Card to Begin."

Two High-Quality Cameras

- ❖ The interior camera has electronic autofocus and light adjust features. Our cameras are High Definition and do not require motors, thus eliminating all moving parts which would normally be used by the customer to adjust the camera. Instead, through our custom software, the Fun Stop Photos™ booth automatically centers the camera on the subject, in order to frame the picture. If the customer wishes to further adjust, he or she can use the up and down arrow buttons at any time during the picture process to adjust the frame through the software.
- ❖ The exterior camera is used for attraction, instruction and advertising. Pictures can be taken at operator-selectable intervals and are displayed on the rear 26-inch LCD monitor. The exterior camera, too, has the electronic autofocus, light adjust features, and no motors or moving parts.

Industrial-Grade Electronics

- ❖ Industrial Grade Motherboard. Fun Stop Photos uses an industrial grade motherboard system which **does not require fans for cooling**. This system is designed specifically for extreme industrial environments that are subjected to high heat, humidity, constant use, dirt and industrial grime. By eliminating cooling fans (i.e., moving parts) reliability is greatly increased.
 - ❖ The particular MSI mother board solution that Team Play selected is scheduled to be in production for the next five years – unlike consumer grade electronics (desktop computers) which often go to end-of-life within one or two years, prohibiting backward compatibility.
 - ❖ Medical Grade Power Supply. In addition, Team Play uses a medical grade power supply costing several times the cost of conventional computer power supplies. Medical grade power supplies are more costly, because they are built to a higher standard and must be substantially more reliable than conventional power supplies.
-

LED Cabinet and Control Lighting

- ❖ All decorative lighting used on the Fun Stop Photos™ cabinet consists of low voltage (12v) LEDs with the manufacturers' estimated operating life of 100,000 hours (11-plus years).
 - ❖ All button controls and interior subject light also are low voltage (12v) LEDs estimated to operate for 100,000 hours.
 - ❖ The attract strobe atop our trademarked camera topper also utilizes low voltage (24v) LEDs. At Team Play, we strive to minimize your service calls and make life easier for you!
-

High Security Locking System

- ❖ The Fun Stop Photos™ photo booth is designed to be an unattended, stand-alone vending machine, so we have addressed your security concerns. Our Fun Stop Photos™ booth uses three screw-type “T” handle locking systems to protect the cash door, printer access panel, and rear electronics access panel.

- ❖ Forced Entry Feature: The photo booth camera doubles as a security camera. Forced entry of the cash door on a Fun Stop Photos™ photo booth will trigger an automatic series of photos to be taken of the offender, providing evidence of the crime.
-

Full Metal Frame, Plywood Construction, Heavy Duty Casters & Leg Levelers

- ❖ Fun Stop Photos™ booths have a full 1½ inch integrated square tubular steel frame supporting a 1½ inch plywood floor.
 - ❖ The left and right sidewalls and seat are constructed of ¾ inch furniture-grade plywood.
 - ❖ The front, back and ceiling are double-wall box construction, built from a combination of plywood and MDF components.
 - ❖ Individually, each of the four 3-inch heavy-duty casters is capable of supporting the entire 568 lbs. of the Fun Stop Photos™ booth. Each caster has a dynamic load rating of 700 pounds, resulting in a total load capacity of 2800 lbs.
 - ❖ The heavy-duty ¼ inch “broad pad” leg levelers are threaded directly into the steel frame of the Fun Stop Photos™ booth, ensuring the stability of the cabinet on any surface. We do not T-nut the leg levelers through wood! That is a very unreliable way to stabilize a cabinet. Instead, Fun Stop Photos™ leg levelers are threaded through the steel frame.
-

Giant Camera Topper with Strobe Capability

- ❖ The neon-green Camera Topper is trademarked by Team Play, Inc., and really draws attention from across the room. But, the Topper can be left off.
 - ❖ The 24v LED strobe in the Camera Topper is enabled through the photo booth menu features and works in conjunction with the rear camera for the attract screen. The rear picture and strobe interval can be set from 30 seconds to 10 minutes. Or, the strobe can be turned off completely.
-

Software Features

- ❖ Rear 26" LCD screen advertising allows the operator to add hundreds of ad images to be displayed on the rear screen.
- ❖ Visual and Verbal Instructions. Instructions are periodically displayed on both LCD monitors, allowing customers to become familiar with how to use your Fun Stop Photos™ booth. In addition, customers are visually and verbally walked through the picture process, upon payment start up.
- ❖ Time-released advertising allows the operator or location to load a number of ads or promotions for the month, quarter or year, displaying them automatically only during the time designated.
- ❖ Fourth-frame customization allows the operator to add a company logo, redeemable coupon, or advertisement to the fourth frame of each photo strip and between the photos of the rear camera 4" x 6" prints. Using the menu options and a USB flash drive, customization files in .png or .tga format are easily uploaded, in batches or one at a time. Detailed directions and sample Photoshop files can be viewed and downloaded from our web site at www.TeamPlayInc.com.
- ❖ Eighty-Nine Border Options. The Fun Stop Photos™ photo booth comes pre-loaded with 89 different borders. Or, you can have custom borders created specifically for your location and loaded onto your photo booth by Team Play.
- ❖ Time-released holiday borders are automatically added to the customers' options. The default setting will allow these borders to appear prior to the date of the holiday and disappear an appropriate one week after the holiday date.
- ❖ Animated Border Selection: This feature categorizes the borders into groups, making it easier for the customer to select a border without having to go through each and every one. Groups will include categories for "color borders," "sports borders," "seasonal borders," and so on, up to as many categories as the operator wishes to include. The number of borders within each category can also be limited by the operator.
- ❖ Event Photo Storage is a feature that allows the operator to save photos when the photo booth is put on "Event Play" while rented for events. The photos taken during the event are stored on a USB flash drive for later use by the event host. Up to 10 events can be programmed in advance for a single day.
- ❖ Twelve Background Music Options. The operator has the ability to select one of twelve musical backgrounds that plays upon payment start up, or the background music can be turned off completely.

- ❖ Rear Screen Status Icon. In the event of a non-fatal error such as paper out, a rear screen error status icon (a yellow exclamation point in a circle ) will appear in the lower left corner of the back 26" LCD screen. This feature allows company personnel to immediately identify non-fatal errors such as paper out, printer failure or camera status, without opening the machine. If the rear screen error icon is displayed, more detailed information can be seen on-screen when the coin door is opened.
- ❖ Inside Screen - Printer Status: Upon opening the cash door, the interior screen will automatically display the status of both printers. If both printers are functioning properly and have media, the background color of the screen will be "Blue," indicating all is well. The exact number of prints remaining in each printer will also be displayed. A "Red" background indicates that one or both of the printers are out of media, or a more serious problem exists. The printer status will be clearly stated on the screen (e.g., "paper jam printer 1").
- ❖ Audit Reports are generated as "current" for a given time period and "lifetime." Current audits can be reset after each collection. Lifetime audits are non-resettable. An audit report also can be printed directly from the Fun Stop Photos™ booth at the time of collection.
- ❖ Camera Adjustments. The Fun Stop Photos™ software allows a full range of camera adjustments, including brightness, contrast, saturation, hue, sharpness and white balance temperature. Thus, your camera can readily be adjusted to accommodate the lighting environment of your location.
- ❖ Automatic Color Correction feature allows realistic, high-definition prints and media storage.

Language Options

- ❖ English, Spanish and Portuguese: The language selected will appear in all written and verbal instructions. Your customers will hear the photo booth instructions in the selected language. All operator adjustment menus will also appear in the selected language.

Dimensions

- ❖ 30.5" wide x 43" deep
- ❖ 99" high with the Camera Topper
- ❖ 78" high without the Camera Topper
- ❖ 568 pounds when set-up – 630 pounds crated for shipping
